

SUA - THE SINGLE USER ACCOUNT

Single User Accounts

We are improving the way you login and manage users in the zanox Marketplace, by introducing the single user account. This means that you will be able to easily and securely manage all of your zanox and Awin accounts using just one login.

You will no longer need to share your login credentials and are able to login using your own email address and password. What's more, you'll be able to add as many publisher accounts to your user account as you like. Users with access to a publisher account can then easily invite others to join that account.

What's changed?

Currently you login with: "Username", now you will need to login with: `youremail@address.com`

What are the benefits of a single user account?

- Increased security
- No more shared passwords
- Each user has their own account
- Improved user management
- Easily manage users with access to your publisher account with the 'manage users' button
- Easily give others access to your publisher account by clicking the 'invite user' button. We will remove the sublogin functionality, as it's no longer necessary
- Easy to remember login – it's your email address and personal password

What do I need to do?

- If you already use an email address to log-in, you are set. There will be no changes for you.
- If you currently login with a "username" or "sublogin" you will be asked to enter your email address, and choose a password. Then simply follow the short instructions.
- If you upgrade multiple publisher accounts using the same email address, these accounts will automatically be linked to your user account.

If you have any questions or feedback, don't hesitate to get in touch with your account representative.
