

**Find this section of the script in the plugin source code (AwinAdvertiserTracking.php):**

```
// s2s  
awin_perform_server_to_server_call($_COOKIE[AWIN_AWC_COOKIE_NAME],  
$_COOKIE[AWIN_SOURCE_COOKIE_NAME], $order, $advertiserId, $voucher);
```

**And then place the code below, exactly above it:**

```
echo '<script type="text/javascript">'.$masterTag.'</script>';  
echo '<script src="https://www.dwin1.com/XXXXX.js" type="text/javascript"></script>';
```

This section of the plugin source code should then look like this:

```
echo '<script type="text/javascript">'.$masterTag.'</script>';  
echo '<script src="https://www.dwin1.com/XXXXX.js" type="text/javascript"></script>';
```

```
// s2s  
awin_perform_server_to_server_call($_COOKIE[AWIN_AWC_COOKIE_NAME],  
$_COOKIE[AWIN_SOURCE_COOKIE_NAME], $order, $advertiserId, $voucher);
```

**Please do not forget to replace the XXXXX with your own Advertiser ID.  
Once this change is made, please update/save changes and carry out a test transaction.**
